

Small and yet perfectly formed

Silvers, designed specifically for taking small and intricate grafts.

“New” to the range the Silvers stainless steel “miniature” skin graft knife was originally developed by H.L.Silver in Toronto, Canada.

Combined with our surgical stainless double edged razor blades it is ideal for taking small intricate grafts from areas which would not be accessible with the larger standard knives.

Although used mainly within Plastic, Reconstructive and Oral surgery the Silvers can also be used for the debridement of wounds.

The Silvers Skin Graft Knives are individually boxed either with a blue Autoclavable medical grade plastic handle (Code: 9911) or a Stainless steel handle (Code: 9912) whilst the blades are sealed in foil packets, sterilised and boxed in units of 10 pieces (Code: 9942)

Swann-Morton®

THE WORLD'S LEADING SURGICAL BLADE MANUFACTURER

Silvers, designed specifically for taking small and intricate grafts.

In cases where external body tissues have been destroyed beyond the body's natural ability to repair effectively and quickly usually after severe physical trauma, grade 3 burns or tissue infections, a doctor or surgeon

may elect to use healthy tissues from another part of the body to assist the healing process of the damaged tissues.

Not only does this method speed the healing process of the

body, but the donor tissue, having covered the original wound site greatly helps to reduce the chance of infection at the injured site.

A dermatome or skin graft knife is the instrument used to harvest thin slices of skin from the elected donor area in order to use them for making skin grafts.

The Swann-Morton skin graft range has recently been extended with the addition of the miniature Silvers Knives with their 40 mm (1½ inch) postage stamp size cutting blade ideal for small intricate grafts to compliment the longer 158 mm (6 inch) blades used with the Watson, Cobbett and Braithwaite knives for larger grafts and skin repair.

Exclusive to the range is the SG3 Minor Sterile Skin Graft blades which can be used conveniently with a standard No.3 Surgical handle at the site of a major incident where time may be

critical and debridement of the wound could result in improved healing times and reduction in infection of the surrounding healthy tissues.

Silvers Skin Graft Knife

Stainless Steel, Non-Sterile, individually boxed

Product	Product No	Unit
For use with Blade 9942
